WATER BASED BEE HIVE PAINT

Top quality enamel paint without solvents and other hazardous chemicals. It insulates, protects and preserves the hive, providing it with long-term protection and ideal conditions for the colony. It gives the hive increased durability to sunlight and is available in eight specific shades, based on the bee's color perception.

100% acrylic

Coverage
12-15m²/Lt

Drying
1-2 hours

• Does not contain hazardous chemicals

• Harmless for the colony

• Water based 

5 YEARS
• RESISTANT •

SYSTEM FOR THE MAINTENANCE AND PROTECTION OF HIVES

For the painting of exterior surface of hive requires a paint that is flexible with resistant on weather conditions and adjust the humidity. CHROMODOMI has developed a new system for the maintenance and protection of hives that meet these requirements. The system application provides long-term protection to hive, resulting in a healthier and more efficient honeybee. **The system consists of the following products:**

• XYLOFINE

White, acrylic water based wood putty for internal and external use. It fills and seals cracks which generated on hive, from the weather conditions. The application of putty, inside of the hive is necessary to prevent bees from closing the cracks with propolis. External its necessary also for the wood protection.

• LINSEED OIL

100% raw linseed oil, suitable for oiling wooden surfaces. It is applied to the external surfaces of the hives and has kept in good condition for several years. It is preserved the wood and is absolutely safe to use.

• WOOD CARE-W

Water based protective varnish for wood. Penetrates deeply into the wood and does not require the coating any other substrate. So when spreads over to wood operates simultaneously as primer. Does not contain hazardous chemicals. It is highly resistant to weather changes and adjusts the humidity of the wood leaving to breathe, without adverse effects on the colony of bees.

• VELATURA-W

Water based white undercoat for all interior and exterior wood surfaces. It is applied easily and provides great coverage and high adhesion. It is almost odourless and easy to use.

• CHROMOKOL

High quality, fast setting white wood glue. Dries transparent. Ideal for bonding of practically all hard and soft types of wood. It has excellent adhesion and high resistance. In the corners of hives, which is prone to moisture, required filling with a mixture of glue with sawdust. It completely closes the pores of wood and prevents moisture pass.

• BEELAC

Top quality enamel paint without solvents and other hazardous chemicals. It insulates, protects and preserves the hive, providing it with long-term protection and ideal conditions for the colony. It gives the hive increased durability to sunlight and is available in 8 specific shades, based on the bee's color perception.

Available in White and the below shades:
